

Task 6 : Create a Strong Password and Evaluate Its Strength.

1. Passwords Created for Testing:

- Password: apple123
Complexity Details: Lowercase + numbers

Test Your Password		Minimum Requirements			
Password:	<input type="text" value="apple123"/>	<ul style="list-style-type: none"> Minimum 8 characters in length Contains 3/4 of the following items: <ul style="list-style-type: none"> Uppercase Letters Lowercase Letters Numbers Symbols 			
Hide:	<input type="checkbox"/>				
Score:	<div>37%</div>				
Complexity:	Weak				

Additions		Type	Rate	Count	Bonus
✓	Number of Characters	Flat	$+(n*4)$	<input type="text" value="8"/>	+ 32
✗	Uppercase Letters	Cond/Incr	$+\left((len-n)*2\right)$	<input type="text" value="0"/>	0
⚙	Lowercase Letters	Cond/Incr	$+\left((len-n)*2\right)$	<input type="text" value="5"/>	+ 6
⚙	Numbers	Cond	$+(n*4)$	<input type="text" value="3"/>	+ 12
✗	Symbols	Flat	$+(n*6)$	<input type="text" value="0"/>	0
⚙	Middle Numbers or Symbols	Flat	$+(n*2)$	<input type="text" value="2"/>	+ 4
✗	Requirements	Flat	$+(n*2)$	<input type="text" value="3"/>	0

Deductions		Type	Rate	Count	Bonus
✓	Letters Only	Flat	$-n$	<input type="text" value="0"/>	0
✓	Numbers Only	Flat	$-n$	<input type="text" value="0"/>	0
⚠	Repeat Characters (Case Insensitive)	Comp	-	<input type="text" value="2"/>	- 2
✓	Consecutive Uppercase Letters	Flat	$-(n*2)$	<input type="text" value="0"/>	0
⚠	Consecutive Lowercase Letters	Flat	$-(n*2)$	<input type="text" value="4"/>	- 8
⚠	Consecutive Numbers	Flat	$-(n*2)$	<input type="text" value="2"/>	- 4
✓	Sequential Letters (3+)	Flat	$-(n*3)$	<input type="text" value="0"/>	0

- Password: Apple@123
Complexity Details: Uppercase + lowercase + numbers + symbol

Test Your Password		Minimum Requirements			
Password:	<input type="text" value="Apple@123"/>	<ul style="list-style-type: none"> Minimum 8 characters in length Contains 3/4 of the following items: <ul style="list-style-type: none"> Uppercase Letters Lowercase Letters Numbers Symbols 			
Hide:	<input type="checkbox"/>				
Score:	81%				
Complexity:	Very Strong				

Additions		Type	Rate	Count	Bonus
✳	Number of Characters	Flat	$+(n*4)$	<input type="text" value="9"/>	+ 36
✓	Uppercase Letters	Cond/Incr	$+\left((len-n)*2\right)$	<input type="text" value="1"/>	+ 16
✳	Lowercase Letters	Cond/Incr	$+\left((len-n)*2\right)$	<input type="text" value="4"/>	+ 10
✳	Numbers	Cond	$+(n*4)$	<input type="text" value="3"/>	+ 12
✓	Symbols	Flat	$+(n*6)$	<input type="text" value="1"/>	+ 6
✳	Middle Numbers or Symbols	Flat	$+(n*2)$	<input type="text" value="3"/>	+ 6
✳	Requirements	Flat	$+(n*2)$	<input type="text" value="5"/>	+ 10

Deductions					
✓	Letters Only	Flat	$-n$	<input type="text" value="0"/>	0
✓	Numbers Only	Flat	$-n$	<input type="text" value="0"/>	0
⚠	Repeat Characters (Case Insensitive)	Comp	-	<input type="text" value="2"/>	- 2

✓	Sequential Letters (3+)	Flat	$-(n*3)$	<input type="text" value="0"/>	0

Observations and Best Practices:

- Length matters: Longer passwords significantly increase strength.
- Use all character types: A strong password should include uppercase, lowercase, numbers, and special symbols.
- Avoid common words or sequences: Even with complexity, predictable patterns like "P@ssw0rd" are discouraged.
- Unique and random is key: The more random and unique a password, the stronger it is.

Tips Learned from Evaluation:

- Aim for passwords that are at least 12 characters long.
- Combine letters (both cases), numbers, and symbols in unpredictable ways.
- Avoid dictionary words, dates, or names.
- Consider using passphrases with random words + symbols for both security and memorability.
- Use password managers to store complex passwords safely.

Researched common password attacks :

1. Attack by Brute Force

Attempts to guess a password by attempting every character combination.

Automated tools try each combination until they find the right one.

Make use of CAPTCHAs, enable account lockout, and create lengthy, complicated passwords

2. Dictionary Attack:

This method guesses the password by using a list of real words and popular passwords.

Finds matches, tools iterate through wordlists (such as 123456, qwerty, and password).

Use complex and one-of-a-kind passwords; stay away from real words and recurring patterns.

3. Stuffing Credentials

Attempts to access several websites using previously compromised username-password combinations.

Exploits reused credentials from data breaches to access other accounts.

Never reuse passwords; use unique ones for every site and enable multi-factor authentication (MFA).

How Password Complexity Affects Security:

- Simple passwords (e.g., "password123") can be cracked in seconds by dictionary attacks.
- Complex passwords with randomness and length can take years or decades to crack using brute force.
- Higher complexity increases entropy, reducing the success rate of automated guessing attacks.
- Password complexity delays or defeats cracking attempts, especially if used with multi-factor authentication.
